SaskWorks Venture Fund – Diversified Share Class – Series F

HOW RISKY IS IT?

The value of the Fund could go down as well as up. You could lose money.

One way to gauge risk is to look at how much a fund's returns change over time. This is called "volatility".

In general, funds with higher volatility will have returns that change more over time. They typically have a greater chance of losing money and may have a greater chance of higher returns. Funds with lower volatility tend to have returns that change less over time. They typically have lower returns and may have a lower chance of losing money.

NO GUARANTEES

Like most mutual funds, this fund doesn't have any guarantees. You may not get back the amount of money you invest.

RISK RATING

PFM Capital Inc. has calculated the volatility of the Diversified Class A-Series F share as Low to Medium, but due to the increased liquidity risk associated with LSVCC investments, the risk level has been increased to **Medium**. This rating is based on how much the Fund's returns have changed from year to year and the liquidity risk of the Fund. It doesn't tell you how volatile the Fund will be in the future. The rating can change over time. A fund with a low risk rating can still lose money.

- The risk rating is based on methodology prescribed by the Canadian Securities Administrators ("CSA") which is derived from the standard deviation of monthly returns on investment over the past 10 years utilizing a reference index if 10 year returns are not available.
- This methodology may not fully capture the risks associated with investments in an LSVCC. For example, LSVCCs have a higher than average liquidity risk. Liquidity risk refers to how difficult or costly it may be to divest of an investment held by the Fund. Rules applicable to mutual funds directed at ensuring liquidity do not apply. There are restrictions on the transfer and redemption of shares including a risk that redemption request may be declined by the Fund. Coupled with volatility risk, liquidity risk increases the overall risk profile of the Fund. Redemption of shares prior to the Fund's government-mandated eight year maturity period having lapsed will trigger tax credit repayments.
- For more information about risk rating and specific information that can reflect the Fund's returns, please see the Risk Factors in the Prospectus.
